SUMMARY

Product Manager & Product Designer with an electronics engineering background and **7+ years** planning, coordinating and delivering nationwide infrastructure and mission-critical systems projects. Today I lead product in **B2B SaaS for LATAM**: discovery, roadmap, prioritization and experience design (UX/UI), prototyping with **AI-assisted development** to validate fast. At Glik I redesigned the architecture of a multi-channel ecosystem and **cut project cost by ~40%**; at SUMMA I lead product and design for a school platform serving **5 user types**. My edge: I manage the product, design the experience and understand the engineering behind it.

KEY ACHIEVEMENTS

- **~40% lower product cost** at Glik (~USD 50k → ~USD 30k) by redesigning the architecture: Flutter app, PWA and POS on a single backend (BFF), reusing what was already contracted with the vendor.
- **5 roles, 1 product:** designed the experience and built the frontend of SUMMA, a multi-campus school ERP for principals, coordinators, teachers and families, using AI-assisted development.
- **27 airports + 36 sites** coordinated end-to-end nationwide, with ~29 people across 3 parallel areas (Networks, IT Support, Data Center) using Agile and Kanban.
- **15-minute MTTR** after implementing ITSM (GLPI) and **~30% budget optimization** on a six-figure (USD) budget, with no impact on operational continuity.

EXPERIENCE

Product Owner (External Consultant)
Andrómeda Ventures — Venezuela Sep 2026 – Present

- **External Product Owner for a B2B SMS messaging platform** (integration API and self-service web portal) in a market with compressed margins.
- **Designed a 30-day onboarding plan** —stakeholders → data → users → hypotheses— to inform the core strategic decision: optimize the SMS business or pivot.
- **Analyzing usage by customer** (message volume per company) to segment use cases —collections vs. marketing— and prioritize hypotheses, such as a collections MVP built on assets the group already operates.

Project Manager & Product Designer (UX/UI)
SUMMA — K-12 School Management SaaS (in development) Apr 2026 – Present

- **Share roadmap product ownership** with the investors: feature prioritization, requirements definition and product metrics in an early-stage team of 3.
- **Designed the experience (UX/UI)** —screen architecture, flows and components for principals, teachers and parents— translating business processes into specifications.
- **Built the frontend and process flows** with **AI-assisted development** (Claude Code, Codex, Gemini) to prototype and validate features quickly.
- **Defined the full visual identity** —logo, color system, typography and brand brief— and the platform's landing page (messaging, structure and copy).

Project Lead / Product Consultant (Contract)
Glik — Vehicle Leasing Fintech — Venezuela Mar 2026 – May 2026

- **Redesigned the architecture and product** after the pivot to partner dealerships: several apps (Flutter, PWA, POS) on a single BFF, **cutting cost by ~40%** and ready for new verticals.
- **Ran the impact analysis of the scope change** and defined a phased roadmap (MVP → full platform), including an installment-payment app and a used-vehicle marketplace.
- **Designed the automation of the leasing contract process** (kiosk app synced with Odoo ERP), built the project team and coordinated outsourced development (Flutter, backend, QA).

IT Infrastructure Projects Manager
National Civil Aviation Institute (INAC) — Venezuela Feb 2025 – Feb 2026

- **Led end-to-end** IT and telecom infrastructure projects supporting 24/7 critical operations across 27 airports and 36 sites, managing dependencies with internal and external stakeholders.
- **Coordinated 3 areas in parallel** —Networks, IT Support and Data Center— with ~29 people, using short Scrum-inspired sprints and Kanban (OpenProject).
- **Implemented GLPI as the ITSM platform:** 1,256 incidents handled in the first 3 months, 30 minutes saved per case and a 15-minute average MTTR.
- **Negotiated with international telecom vendors** on a six-figure (USD) budget, achieving ~30% optimization, and automated recurring operational tasks with n8n.

Marketing Director / Digital Projects Coordinator
Grupo Multiromanas — Venezuela 2024 – 2025

- **Led the group's marketing area** (communication strategy, visual identity and sales collateral) and designed and launched its corporate websites on WordPress.

Founder / Automation & Infrastructure Projects Director
MedicPC — Venezuela 2017 – 2024

- **Founded and ran for 7 years** an industrial automation company with five-figure (USD) annual revenue and a team of 5 engineers; also designed its brand identity.
- **Delivered 8 production-line upgrades** for 6 industrial clients, from budgeting and vendor contracting to execution and closing, with business judgment (P&L, cash flow, costing and risk).

University Lecturer, Electronics · *UNETRANS — Undergraduate Electronics* 2018 – 2023

SKILLS

Product: Product discovery · Roadmapping and prioritization (RICE) · Requirements definition · User story mapping · Product metrics (HEART) · Product ownership · MVP

Design: UX/UI · User flows and wireframes · Prototyping · Design systems · Visual identity and branding · Figma · Adobe Illustrator

Technology & AI: AI-assisted development (Claude Code · Codex · Gemini) · AI agents · n8n · JavaScript · WordPress · BFF architecture and APIs · Odoo ERP

Delivery: Agile · Scrum · Kanban · OpenProject · ITSM (GLPI) · Risk management · Vendor and stakeholder negotiation

EDUCATION

M.Sc. in Electrical and Electronic Engineering · Universidad Simón Bolívar (USB) · *Coursework completed · Power Electronics*

B.Eng. in Electronic Engineering · IUT Dr. Federico Rivero Palacios

Certifications: Project Management and Agile Fundamentals (Santander Open Academy, 2026) · Growth Marketing (Coderhouse, 2024) · Community Manager (Coderhouse, 2024) · JavaScript (Coderhouse, 2023)
